TOOLING FOR REPEATABLE SCREENS

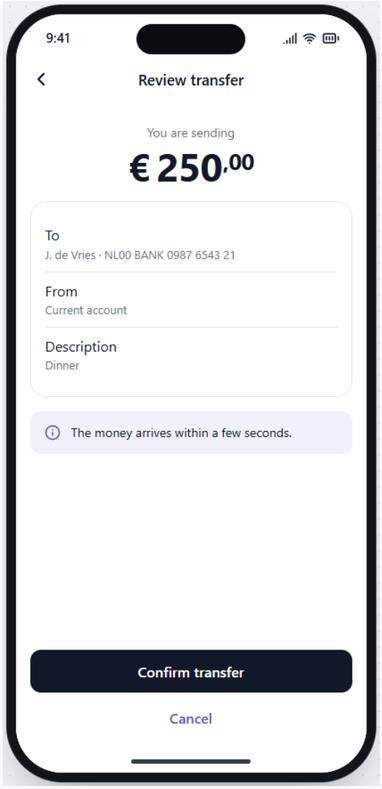

Mobile Webview Builder

Consistency in the shared parts.
Flexibility in each feature.

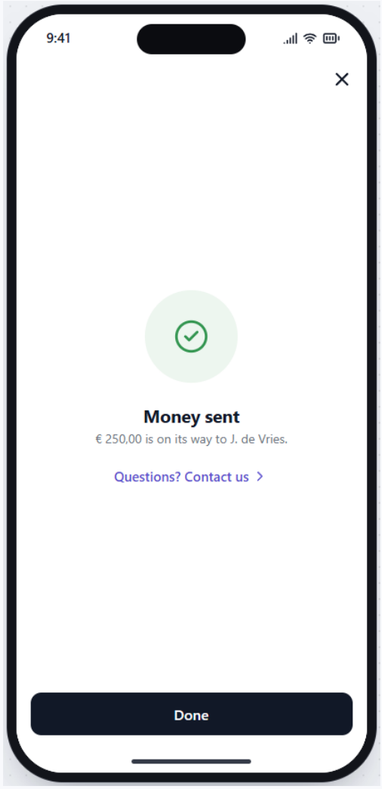

Repeated screens, repeated decisions

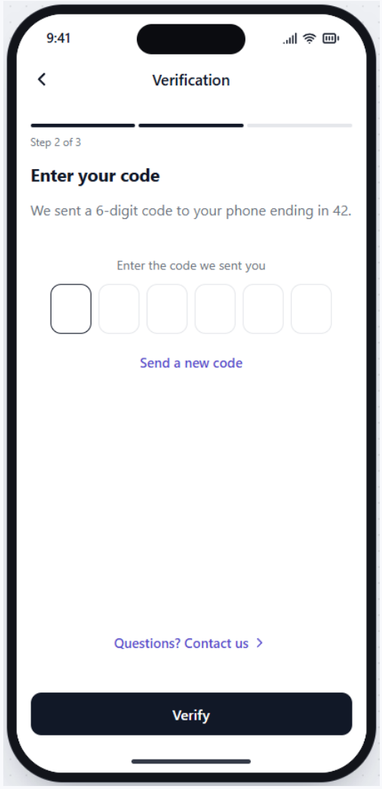

Common patterns deserve a common starting point

Review

Confirmation

Verification

Layouts, spacing, controls and navigation repeat across features.

Consistency through shared parts

Components

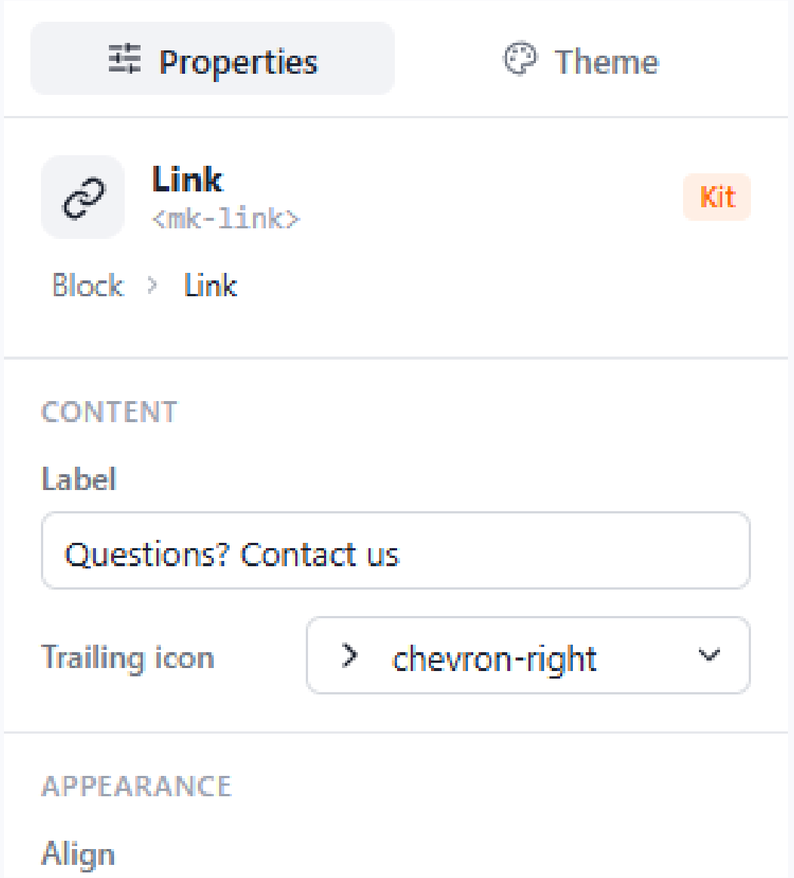

Shared behavior and editing controls

Theme

Shared colors, spacing and typography

Blocks

Shared compositions across screens

One Help link. Two linked screens.

Instances without overrides follow the shared block.

Customization stays deliberate

Change content, layout and behavior as needed

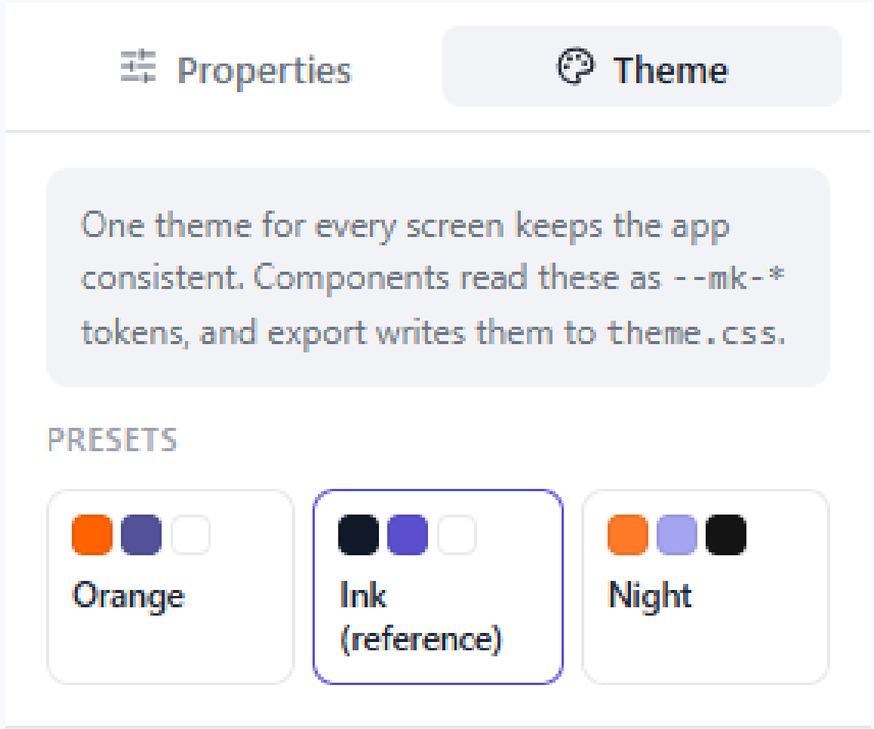

Edit text and arrange layouts

Override an individual block instance

Add custom Lit components

Custom components are coded and registered.

The shared foundation stays reusable.

A repeatable workflow

Compose. Preview. Export.

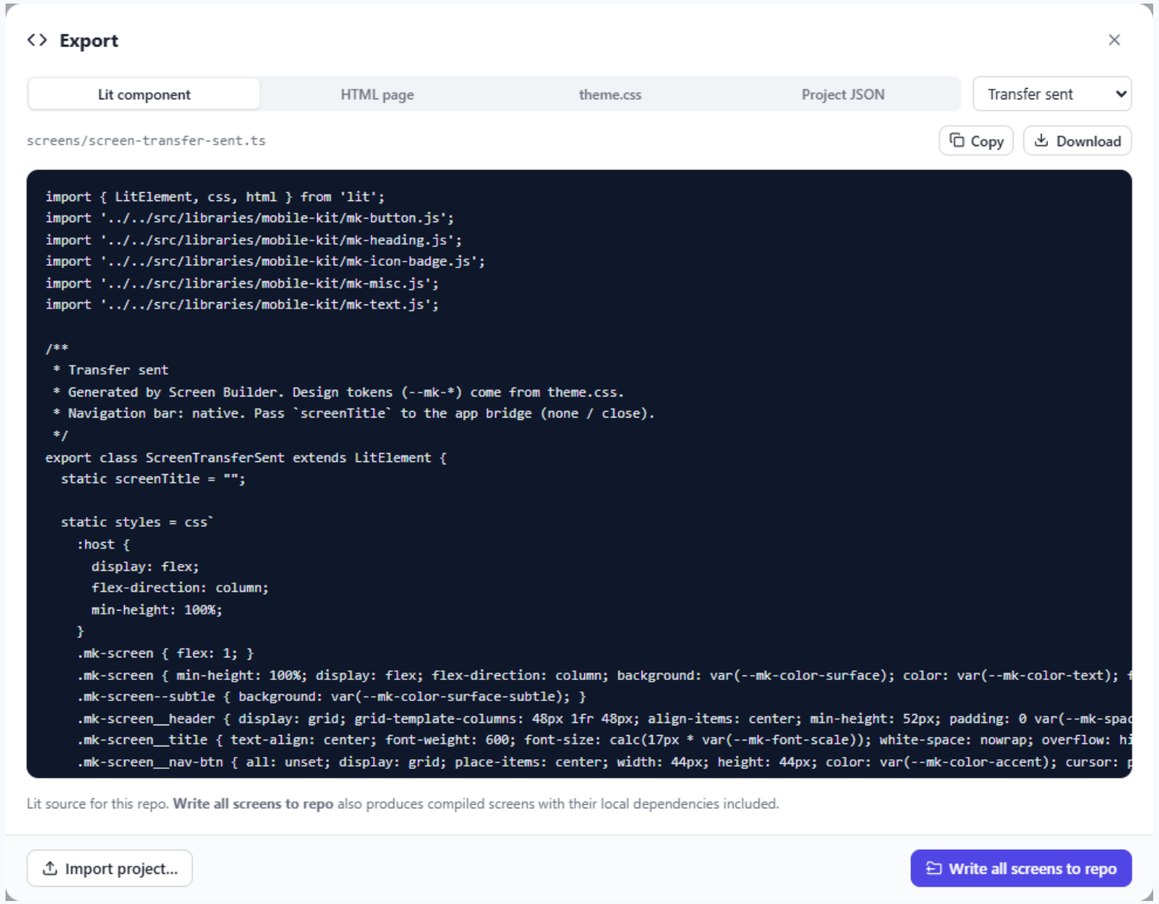

Editable outputs

Lit components

HTML pages

Shared theme

Project JSON

Where tooling earns its place

A good fit

Patterns recur across screens

Rules are shared across features

Changes need a consistent rollout

Keep explicit

Own the component library

Keep exceptional behavior in code

Regenerate exports after changes

Build tooling around the parts that repeat.
